mini wasps

FROM MILJØFLUEN®
TO YOUR STABLE

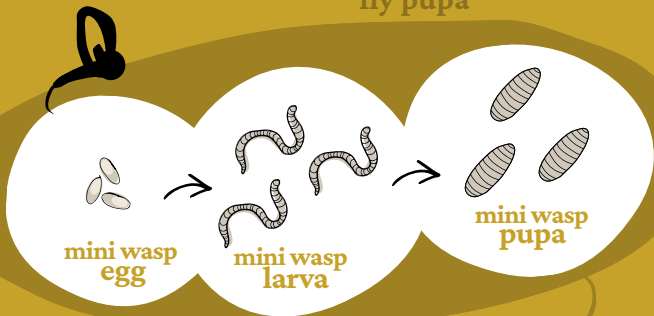

What you need to know about their life-span,
delivery, activation and fly control with mini wasps.
– from the adult mini wasp and fly pupae
containing mini wasp larvae which are packed and
delivered to your stable, and to efficiency with a
long life-span.

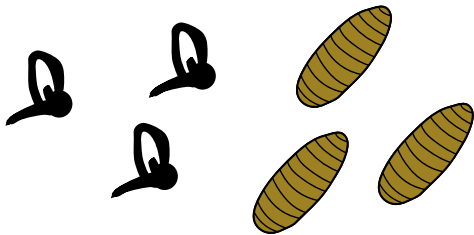

mini wasps life cycle

mini wasp

fly pupa

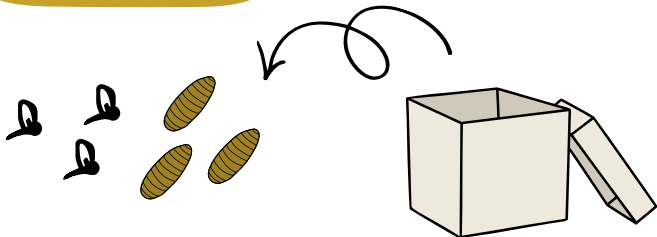

week 1

STARTING

Mini wasps from Miljøfluen® leave our production facilities in Denmark **partly as adult mini wasps and partly as fly pupae containing mini wasp larvae**. The offspring of the mini wasp have killed the fly inside the fly pupa, and mini wasps will therefore emerge from each fly pupa instead.

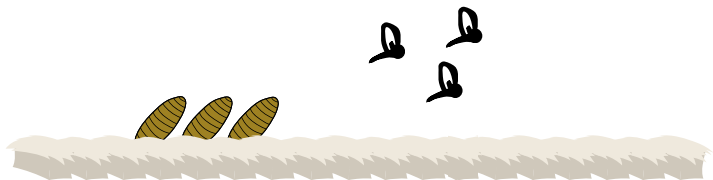

week 2-3

DELIVERY & ACTIVATION

The mini wasps are packed in containers with protective material to ensure proper oxygenation, low humidity, and the correct temperature during transport, allowing optimal hatching conditions. You receive fresh adult mini wasps as well as fly pupae from which **wasps will emerge in the stable within 1–2 weeks**. The contents of **the container are emptied into the deep bedding along the edge of the box** or placed close to the bedding area. The empty container is **disposed of as plastic waste**.

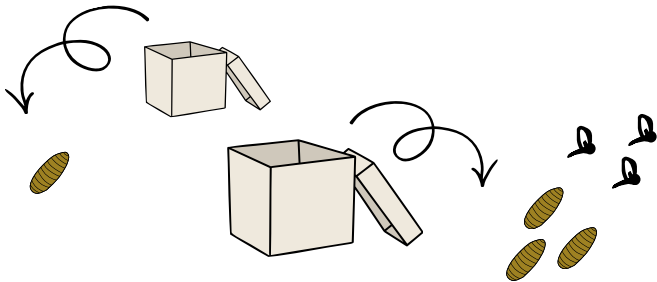

week 3-5

FLY CONTROL

If the weather is cold, the mini wasps and fly pupae may go into a dormant state, which can result in reduced visible activity in the container. The mini wasps resume their normal activity levels when exposed to warmth. The mini wasps locate housefly and stable fly pupae in the bedding, in which they lay their eggs. The eggs hatch into larvae that consume the original pupa from within. The larvae then pupate inside the emptied pupa and develop into adult mini wasps.

week 6-8

NEW DELIVERY

Miljøfluen® supplies you with a delivery of fresh mini wasps and fly pupae containing mini wasp larvae every 14 days.

The contents of the used container are emptied into the bedding.

A newly opened container are **emptied into the bedding along the edge of the box** or placed close to the bedding area. The container is **disposed of as plastic waste**.
